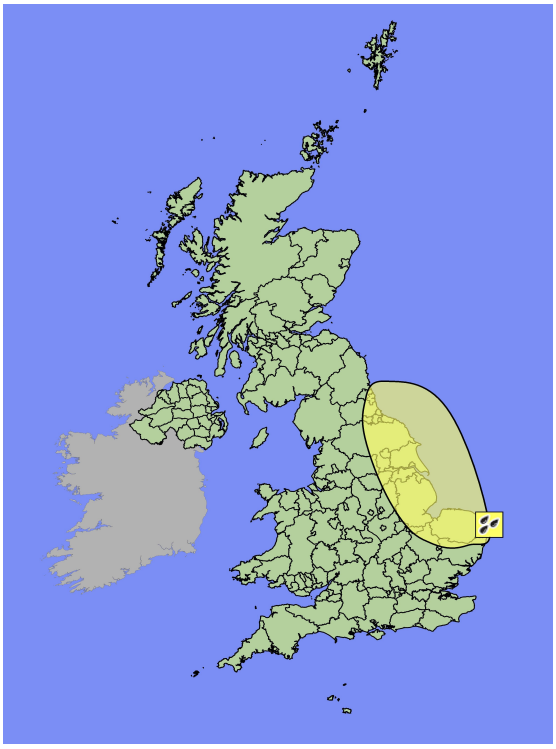
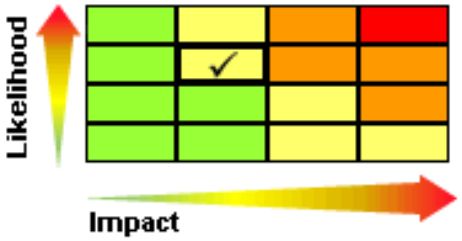
National Severe Weather Warning Service





Chief Forecasters Assessment
Today is the last day of the hot spell, the high humidity in advance of the break down contributing to the risk of locally large rainfall totals over a short period of time. Whilst some places will see no rain, where storms do occur they could be intense, with the risk of 20-25 mm in an hour.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **15:00 on Wed, 03rd Aug 2011** until **22:00 on Wed, 03rd Aug 2011**

Whilst many places will be dry, the public should be aware that isolated thunderstorms will develop this afternoon over parts of eastern England, bringing the potential for torrential downpours and localised flooding.
